What's New in the ProCryptum?

The ProCryptum windows desktop application generates electronic signatures that can be used to encrypt any email sent through their encrypted email server. Using a ProCryptum address like g8d4e7j3d6f457a9. ProCryptum allows you to create secure mail messages. A ProCryptum address is a long string of letters and numbers. For example:g8d4e7j3d6f457a9. The application will also check the emails are sent by you, this way they can be assured of your identity and integrity. Protecting your email by sending it through a ProCryptum server will protect your privacy and identity. Anyone with an encrypted email address can send email from their phone to the ProCryptum website. This will sign the email with a special number and your email will be sent on to the other person as an encrypted email. Messages sent with a ProCryptum address are stored in a secure online vault of ProCryptum. It is possible to send files, images, attachments and any other type of file through a ProCryptum encrypted email server. These files will be sent in a secure envelope and then the recipient will have a ProCryptum encrypted email address. You can either send a single file or all attachments at once. You can select to receive the encrypted files or the plain text attachments. Files are sent in a ZIP format, so the recipient will only be able to open the file if they have an application that is able to extract the content in the file. You can also select to send a letter or an email with attached files and/or attachments. A summary of all the files in the email will be sent to the recipient. When you send an encrypted email it will be a complete email, with subject, text, attachments and any other text or attachments you want to add. To send secure messages in ProCryptum you need to create a ProCryptum address. ProCryptum offers a number of secure email features such as the ability to send completely secure encrypted emails. Protecting your email address using ProCryptum will make sure that you can communicate securely. A ProCryptum address is a long string of letters and numbers. For example: g8d4e7j3d6f457a9. ProCryptum Feature: It is possible to send emails with attachments including file attachments, images, audio files, video files, various type of files and other additional
