A: You can get it from Oscam Emu All images Ipk & Deb. LAPAC LAPAC M16 M16 Features & Description Quick Overview The M16 provides sight in the dark, peeking through foliage, and has a brighter operating light than the Compact version. The low-profile IR-transmitting optical system allows this unit to be used with night vision. The M16 also features a ring light that projects a bright light onto whatever is being viewed. *For further information on compact and theater rated flashlights, visit our flashlights site by clicking here.1. Field of the Invention The present invention relates generally to apparatus for heating metal tubes, and more particularly to an apparatus for heating metal tubes that is capable of efficiently heating metal tubes at an in-line rate of 1 to 4 inch per minute while minimizing any undesirable heat transfer to the metal tube walls. 2. Description of the Related Art Devices for heating metal tubes, such as automotive brake tubing, are well known in the prior art. Typically, such prior art devices use hot metal to heat the metal tubes that are being heated. An example of such a prior art device is the Model No. JOKH-45 sold by the Weldatron Company of Hibbing, Minn. While these prior art devices are effective for heating metal tubes, a problem that exists with such prior art devices is that the heating of the metal tubes is an indirect process, that is, heat is transferred to the tubes from the hot metal of the heating source. In many cases, it is desirable to heat metal tubes in an in-line process. Unfortunately, the indirect heating process that is used in these prior art devices prevents the efficient heating of metal tubes in an in-line process. Furthermore, such prior art devices are not capable of heating a single metal tube at a time. In view of the above, there is a need for a device that is capable of heating metal tubes in an in-line process, while simultaneously heating a single metal tube at a time. Furthermore, there is a need for a device for heating metal tubes which is capable of heating metal tubes at a rate of 1 to 4 inch per minute. Furthermore, there is a need for a device for heating metal tubes which is capable of minimizing the amount of energy transferred from the heating device to the metal tube walls, if at all. If buying a pre-owned
